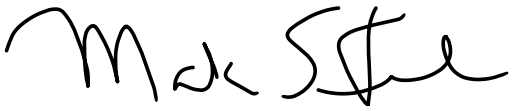
A Message to Our Retail Partners

All Spin Master KINETIC SAND® products have undergone rigorous testing to ensure they meet all regulatory standards and are safe for use. We want to assure customers that KINETIC SAND® is not subject to any recall and remains safe for use. The recall applies only to specific decorative coloured sand products identified by regulators. KINETIC SAND® is a distinctly different product, manufactured using a unique formulation and subject to rigorous safety and quality controls.

KINETIC SAND® is a registered trademark owned by Spin Master Ltd. As such, it is a brand name and proper use of the KINETIC SAND® trademark is essential to protect it. Products bearing this trademark have been tested and proven safe.



Mark Fellin

CERTIFICATE OF ANALYSIS 397769

Client Details

Client	Intertek Hong Kong
Attention	Vicky Chiu
Address	6/F, Garment Centre, 576 Castle Peak Road

Sample Details

Your Reference	**Spin Master Ltd - 225 King St, Toronto, Ontario**
Number of Samples	17 Kinetic Sand
Date samples received	10/12/2025
Date completed instructions received	10/12/2025

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client unless as indicated below in the method summaries. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Please refer to the last page of this report for any comments relating to the results.

Report Details

Date results requested by	18/12/2025
Date of Issue	18/12/2025

NATA Accreditation Number 2901. This document shall not be reproduced except in full.

Accredited for compliance with ISO/IEC 17025 - Testing. **Tests not covered by NATA are denoted with ***

Method ID	Methodology Summary
ASB-003	Asbestos ID –Qualitative identification of asbestos in bulk samples using Polarised Light Microscopy and Dispersion Staining Techniques as per Australian Standard 5370. When Inconclusive mineral fibres are detected by polarised light microscopy including dispersion staining, these fibres may or may not be asbestos fibres. To confirm the identities, another independent analytical technique may be required. When asbestos presence is reported below the reporting limit of 0.01%w/w, the result is not covered by AS5370 and is supplied for information purposes only as required by some state jurisdictions.

Result Definitions

NT	Not tested
NA	Test not required
INS	Insufficient sample for this test
PQL	Practical Quantitation Limit
<	Less than
>	Greater than
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
NS	Not specified
NEPM	National Environmental Protection Measure
NR	Not Reported

Report Comments

Only a portion of the sample provided was analysed. The collection and packing of the sand was conducted outside of our control, and as such, we cannot verify whether the packaged sample is representative of the overall material. Therefore, the results reported apply solely to the subsample analysed.
Note: Samples requested for asbestos analysis were sub-sampled from containers provided by the client
