Asbestos bulk analysis report reference number and issue number:		J325754 – Issue 2 Issue Date: 13/02/26	
<p>ANALYTICAL PROCEDURE (In house document based on ISO 22262-1). The sample is broken down mechanically and chemically to release bound asbestos fibres into suspension. Fibres in suspension are filtered to produce a test sample and the fibre mounted on a carbon-coated metal stub for analysis by examining representative fields of view under scanning electron microscope and selecting suspect fibres for analysis with EDX (energy dispersive X-ray Spectrometer) to definitively determine the asbestos type. SGS United Kingdom Ltd. accepts responsibility only for results obtained from samples received. No responsibility is accepted for errors arising from sampling or transportation of samples by a third party. Samples are retained for a minimum of six months and their records for a minimum of six years from the date of issue of the final report. NOTE: This certificate shall not be reproduced except in full, without the prior written approval of the issuing laboratory. Disclaimer: This document is issued by the Company under its General Conditions of Service accessible at https://www.sgs.com/en/Terms-and-Conditions.aspx.
